Pune/Agra, India

SUMMARY

Software Development experience with **1.5+ years** of production impact, following Agile methodologies — building and shipping features for **50,000+ daily active users**. At **udChalo**, engineered core flight booking modules, driving measurable revenue growth and earning both the **Spotlight Employee Award** and **Combat Readiness Entire Quarter Award by CEO**. At **VWO/Wingify**, contributed to the Analytics A/B Testing Tool trusted by **Microsoft, Disney, and eBay** across **90+ countries**.

SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL

Frontend: React.js, Redux, Next.js, HTML5/CSS3/SCSS, Bootstrap, AngularJS, GraphQL, Webpack, Core Web Vitals, Responsive Design

Backend: Node.js, Express.js, REST APIs, WebSockets.

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Strapi CMS

Cloud/DevOps: AWS, Redis, Docker, Grafana, Kibana, Linux, Git, GitHub.

EXPERIENCE

Software Engineer I — udChalo (Flight Booking Platform for Defence Personnel), Pune

April 2026 – Present

- Expanded revenue surface by shipping new fare types and ancillary services (seat, meal, baggage) into the booking pipeline, with a clean pre-launch and post-release record monitored via Kibana — recognised with the **Combat Readiness | Entire Quarter Award (Q1 FY26)**. [\[View\]](#)
- Broadened platform capability and booking flexibility by shipping **Pet Travel Booking** and **True Round Trip** support.
- Architected reusable, **prop-driven React components** (search widgets, **Email Autocompletion**, booking forms) across the flight journey, cutting duplicate UI code and standardising design patterns.

Software Developer Trainee

July 2025 – March 2026

- Recognised with the **Spotlight Employee Award (Feb 2026)**. [\[View\]](#) — Engineered core flight booking journey modules — **EMI Pricing**, **Dynamic Fare Tags**, and **real-time Flight Status tracking** — directly impacting how defence personnel transact and navigate across the web app.
- Led the Web revamp, migrating the platform from Angular 12 to Next.js 14 and integrating **Strapi CMS** for decoupled content management — boosting performance, SEO, and developer velocity.
- Introduced **Guided Flow** by eliminating dead-click paths across the booking funnel — reducing significant drop-off.

Software Engineering Intern — Wingify / VWO (Global B2B SaaS), Delhi

Apr 2025 – Jun 2025

Experience Letter: [\[View\]](#)

- Engineered analytics report views for **click-event tracking and heatmap data** within VWO's Insights module — a **B2B SaaS** platform trusted by **6,000+ clients across 90+ countries**, including **Microsoft, Disney, and eBay** — using TypeScript and AngularJS in the app-v3 codebase.
- Built a **report-mapping layer** that unified funnel drop-off and visitor segment data into structured, consistent report outputs for global enterprise teams across VWO's client base.
- Contributed to the **A/B testing report pipeline** — connecting experiment variation data to the analytics dashboard so behavioural insights surface alongside test results for product teams worldwide.

PROJECTS

RenderLab — Frontend Performance Monitoring SaaS

React · TypeScript · Fastify · PostgreSQL · Redis · Next.js

- Built a full-stack **React performance monitoring platform** that detects unnecessary re-renders and identifies root causes such as props, state, context, and parent updates.
- Developed a custom **React Profiler SDK** and Fastify ingestion API to collect and process render performance data from React applications.
- Built a Next.js dashboard with **live render timelines**, **component-tree visualization**, and **commit-level session replay** for faster performance debugging.
- Designed a reliable data pipeline using **partitioned PostgreSQL**, **Redis-based rate limiting**, and **idempotent batch retries**, and deployed the platform on Railway with CI-based integration testing.

[\[Live\]](#) · [\[npm\]](#)

Distributed Deployment Platform

Node.js · TypeScript · Express.js · AWS S3 · Redis

- Architected a deployment pipeline using **Redis BRPOP-based queue**, decoupling upload, build, and serving into **independently scalable services**.
- Engineered an **asynchronous build worker system** that picks up jobs from a shared queue, downloads source from S3, builds the project, and uploads production artifacts back to S3.
- Implemented **subdomain-based routing** to resolve deployment IDs and serve static build artifacts directly from **AWS S3**.
- Updated deployment status in **Redis** to track build progress (queued, building, ready/failed) across the pipeline.

ACHIEVEMENTS

- **Spotlight Employee Award, udChalo** — awarded by CEO for ownership and independent delivery of EMI Pricing across the Flight Booking Journey and Dynamic Flight Fare Tags (Feb 2026). [\[View\]](#)
- **Combat Readiness Award | Entire Quarter Award, udChalo** — recognized for driving revenue growth and expanding product reach by introducing new fare types and ancillary services (Q1 FY26). [\[View\]](#)
- **Semi-Finalist, Tally Code Brewers National Hackathon** (Tally & Unstop, 2024). [\[View\]](#) **Round 2 Qualifier, Innovate India Coding Championship.** [\[View\]](#)
- **Machine Learning Certification** — IIT Madras [\[View\]](#) | **Advanced Backend Development Certification** [\[View\]](#)
- Solved **350+ LeetCode problems (Top 6%)** and **300+ GeeksforGeeks problems**

EDUCATION

B.Tech, Computer Science & Engineering — Madan Mohan Malaviya University of Technology, Gorakhpur GPA: *Nov 2021 – May 2025*
7.41/10
